

## Balloon Investigation Data Sheet

- Decide what to put in each balloon.
- Predict what will happen when you place the filled balloon in a tank of slightly warm water.
- Record the type of water and your prediction, as well as evidence for your prediction, in the table.
- Once the first two columns are filled in, test the balloon. Then, record your results, both in the table and in the diagram below.

<b>SUBSTANCE</b> What will you put in the balloon?	<b>PREDICTION</b> Do you think the balloon will sink, float, or go between? Why do you think that?	<b>RESULT</b> What happened? Where did the balloon go?
Balloon #1:		
Balloon #2:		
Balloon #3:		

## Diagram of Results

Draw where in the tank each balloon went. Label the balloons "1," "2," and "3."
